PTG 1802 Protective Case

Description

The “PTG Bumper” is a 3D-printed protective sleeve for the PTG 1802. This is designed to protect the device from accidental damage due to mishandling.

Note: The 3D printing process causes minor surface irregularities and feathered edges, this is normal.

Step 1:

Insert the BNC connectors through the holes in the top of the case.

Step 2:

Slide one of the lower corners into the case.

Step 3:

Ease the the other cordner into the case (some pressure will be necessary)

If you are having some difficulty, it helps if the case is not overly cold. Try warming the case a little by leaving in direct sunlight for a few minutes. Do not use a strong heat source which will melt or damage the case.

Note: The protective case is designed to minimize the possibility of accidental damage. It cannot fully prevent it.
