

RYB 6000

greenMachine[®] Rack Frame

RYB 6000

yellobrik extension for RFR 6000

Features

- Compact 1 RU design
- Accommodates up to six yellobriks
- Optional redundant power protection
- Rack position adjustable to Recessed, Flush or Protruded
- Power surveillance via RJ45 GPIO connection

Description

The RYB 6000 is an extension to the RFR 6000 and enables the mounting of six yellobrik modules to the rack frame. When housed with RFR 6000, the combined unit accommodates six yellobrik and a greenMachine.

The RYB 6000 comes with the built-in rack power connections and accommodates two power supplies for redundancy. It facilitates easy installation and removal of modules with effective cable management. It provides easy access to the modules reducing maintenance time and enhances safety.

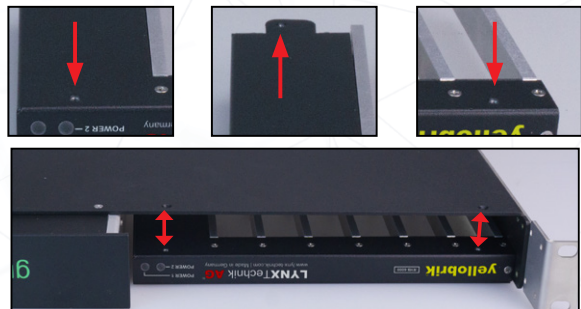

The greenMachine and yellobriks are ideally suited for standalone applications but they reach their full potential when used within a system design.
